Running title: NMN vs NR Indirect Comparison MA

Abbreviations: NMN, nicotinamide mononucleotide; NR, nicotinamide riboside; NAD+, nicotinamide adenine dinucleotide; RCT, randomized controlled trial; PRISMA, Preferred Reporting Items for Systematic Reviews and Meta-Analyses; PROSPERO, International Prospective Register of Systematic Reviews; RoB 2, revised Cochrane Risk of Bias tool for randomized trials; GRADE, Grading of Recommendations Assessment, Development and Evaluation; CINeMA, Confidence in Network Meta-Analysis.

Financial support: This research received no specific grant from any funding agency, commercial or not-for-profit sectors.

Declaration of interest: None.

Authorship: A.T.N.: Conceptualization, Data curation, Formal analysis, Investigation, Methodology, Project administration, Software, Validation, Visualization, Writing - original draft, Writing - review & editing. B.N.: Data curation, Investigation, Validation, Writing - review & editing.

Ethical standards disclosure: Not applicable. This is a systematic review of published studies; no primary research involving human participants was conducted.

Data availability: The complete dataset, analytical code, and all figures are publicly available at https://github.com/AlexTaiNguyen006/NMN-NR-systematic-review-meta-analysis and archived on Zenodo (DOI: 10.5281/zenodo.19403850).
